ABOUT GRUPS AUTOMATION

Company Introduction

Grups Automation is a leading industrial automation company specializing in the design, manufacturing, engineering, and implementation of advanced automation control systems for industrial machinery and industrial plants.

Located in Vasai, the company delivers innovative automation solutions that improve productivity, operational efficiency, process reliability, and industrial safety across multiple sectors.

Grups Automation focuses on delivering high-quality industrial automation systems using modern technologies from globally recognized automation platforms such as Siemens PLC, Siemens HMI, Siemens VFD, WinCC SCADA, Industrial Networking, and Process Control Systems.

Our Vision

To become one of the most trusted industrial automation solution providers by delivering innovative, reliable, and cost-effective automation technologies for modern industries.

Our Mission

- Deliver world-class industrial automation solutions
- Maintain high-quality engineering standards
- Provide reliable customer support
- Build efficient and intelligent industrial systems
- Support industries with advanced automation technologies

Our Core Services

Industrial Automation Solutions

Grups Automation provides complete industrial automation solutions including:

- PLC Automation
- SCADA Systems
- HMI Development
- VFD Automation
- Control Panel Manufacturing
- Industrial Networking
- Motion Control Systems
- Process Automation
- Instrumentation Panels
- MCC Panels
- Electrical Control Systems

Siemens Automation Solutions

The company specializes in Siemens industrial automation products and services including:

Siemens PLC Systems

- Siemens S7-1200
- Siemens S7-1500
- Siemens S7-300
- Siemens S7-400
- Siemens ET200 Series

Siemens HMI Systems

- KTP Series
- Comfort Panels
- Basic Panels
- Industrial Touch Panels

Siemens VFD Systems

- SINAMICS V20
- G120 Series
- MM420
- MM430
- MM440
- Servo Drive Systems

SCADA Solutions

- Siemens WinCC
- WinCC Runtime
- WinCC Redundancy
- Industrial Monitoring Systems

Control Panel Manufacturing

Grups Automation designs and manufactures:

- PLC Control Panels
- MCC Panels
- VFD Panels
- Instrumentation Panels
- Drive Panels
- Pump Panels
- Process Control Panels
- Automation Panels
- Flameproof Panels
- Custom Electrical Panels

All panels are manufactured using high-quality industrial standards and undergo strict quality testing before deployment.

Engineering Capabilities

The company provides:

- CAD Design Engineering
- Electrical Design
- PLC Programming
- HMI Development
- SCADA Development
- Industrial Networking
- Application Engineering
- Automation Consultation
- Testing & Commissioning
- After-Sales Support

Industries Served

Grups Automation provides automation solutions for:

- Automobile Industry
- Food & Beverage Industry
- Pharmaceutical Industry
- Packaging Industry
- Water Treatment Plants
- Chemical Industry
- Manufacturing Plants
- Textile Industry
- Oil & Gas Industry
- Process Industries

Automation Systems Developed

The company has experience in:

- Automatic Pick and Place Systems
- Automatic Vision Inspection Systems
- Automatic Storage & Retrieval Systems
- Online Weighing Machines
- Process Automation Systems
- Distribution Control Systems
- PLC-Based Plant Automation

Quality Standards

Grups Automation follows strict quality control procedures and industry standards including:

- IS Standards
- NEMA Standards
- CE Standards
- Industrial Safety Standards

Every system is tested for:

- Performance

- Reliability
- Safety
- Stability
- Long-term industrial operation

Why Choose Grups Automation

- Experienced automation engineers
- Customized industrial solutions
- High-quality manufacturing
- Reliable technical support
- Competitive pricing
- Strong Siemens automation expertise
- End-to-end project execution
- Fast service response

SIEMENS PLC S7-1500 – COMPLETE INDUSTRIAL AUTOMATION GUIDE

Introduction to Siemens S7-1500

The Siemens S7-1500 PLC Series is an advanced modular automation controller designed for medium and high-end industrial automation applications. It delivers high-speed processing, advanced diagnostics, integrated safety, motion control capabilities, and seamless industrial communication.

The S7-1500 PLC family is engineered for:

- High-performance automation
- Industrial process control
- Machine automation
- Manufacturing systems
- Motion control
- Distributed automation systems

The platform integrates completely with the Siemens TIA Portal engineering framework, providing centralized engineering, configuration, diagnostics, and monitoring.

Key Features of Siemens S7-1500

High-Speed Processing

The S7-1500 series provides ultra-fast execution performance for industrial automation applications requiring rapid response times.

Integrated PROFINET Communication

Supports industrial Ethernet communication with integrated PROFINET interfaces and switch ports.

TIA Portal Integration

The controllers are fully integrated with Siemens Totally Integrated Automation (TIA) Portal software for:

- PLC programming
- HMI engineering
- Drive configuration
- Diagnostics
- Motion control

Advanced Diagnostics

Built-in diagnostics help reduce downtime by identifying faults and system conditions quickly.

Safety Integration

Supports fail-safe automation for safety-critical industrial applications.

Motion Control

Supports advanced motion applications including:

- Positioning
- Servo control
- Synchronization
- Speed control

Siemens S7-1500 CPU Models

CPU 1511-1 PN

- 150 KB program memory
- 1 MB data memory
- PROFINET communication
- High-speed processing

CPU 1513-1 PN

- 300 KB program memory
- 1.5 MB data memory
- Industrial Ethernet support
- Compact modular architecture

CPU 1515-2 PN

- 500 KB program memory
- 3 MB data memory
- Dual Ethernet support
- Advanced industrial networking

CPU 1516-3 PN/DP

- 1 MB program memory
- 5 MB data memory
- PROFIBUS and PROFINET support
- High-performance automation

CPU 1518-4 PN/DP

- 3 MB program memory
- 10 MB data memory
- Ultra-fast 1 ns bit processing
- Large-scale industrial systems

Applications of Siemens S7-1500

The Siemens S7-1500 PLC series is widely used in:

- Oil filtration plants
- Automatic batching systems
- Packaging systems
- Pick and place automation
- Newspaper stacking systems
- Heat treatment systems
- Liquid filling systems
- Ointment manufacturing plants
- Textile synchronization systems
- Centrifuge automation systems

Advantages of Siemens S7-1500

Engineering Efficiency

TIA Portal reduces engineering time significantly using centralized automation management.

Scalability

Supports small to large automation systems.

Industrial Reliability

Designed for harsh industrial environments with high operational stability.

Flexible Expansion

Supports distributed I/O systems and modular expansion.

Cybersecurity

Integrated security functions for industrial network protection.

Industrial Communication Protocols

The S7-1500 series supports:

- PROFINET
- PROFIBUS
- Industrial Ethernet
- TCP/IP
- OPC communication

Industries Using Siemens S7-1500

- Pharmaceutical Industry
- Food & Beverage Industry
- Automobile Manufacturing
- Chemical Plants
- Water Treatment Plants
- Textile Industry
- Packaging Industry
- Process Industries
- Oil & Gas Industry

Siemens S7-1500 in Smart Manufacturing

The S7-1500 PLC plays a major role in Industry 4.0 and smart manufacturing systems by enabling:

- Real-time monitoring
- Predictive maintenance
- Industrial IoT connectivity
- Remote diagnostics
- Data acquisition
- Cloud integration

Why Industries Choose Siemens S7-1500

- Reliable industrial operation
- Fast processing speed
- Strong Siemens ecosystem
- Long-term scalability
- Industrial communication support
- Integrated diagnostics
- High system availability

SIEMENS PLC S7-200 CN – INDUSTRIAL AUTOMATION SYSTEM

Introduction

The Siemens S7-200 CN PLC is a compact automation controller designed for small and medium industrial automation applications. It provides flexible automation architecture, modular expansion, and reliable industrial communication.

The S7-200 CN series is widely used for:

- Packaging systems
- Food processing machines
- Laboratory automation
- Conveyor systems
- Small machine automation
- Industrial control systems

Features of Siemens S7-200 CN

Compact Design

Small physical footprint suitable for compact control panels.

RS-485 Communication

Integrated RS-485 communication interface for industrial networking.

Expansion Capability

Supports multiple expansion modules for digital and analog I/O extension.

High-Speed Counters

Supports fast industrial counting applications.

Flexible Communication

Supports:

- PPI protocol
- MPI communication
- Freeport communication

Technical Specifications

CPU Features

- Real-time clock
- 12/16 KB program memory
- 10 KB data storage
- IP20 protection
- Dual RS-485 interfaces

Supported Expansion

- Digital Input Modules

- Digital Output Modules
- Analog Input Modules
- Analog Output Modules
- PROFIBUS Modules
- AS-Interface Modules

Industrial Applications

Packaging Machines

Used for automatic packaging and sealing operations.

Food Industry

Supports:

- Mixing systems
- Cutting machines
- Kneading machines
- Processing equipment

Laboratory Systems

Used in:

- Vacuum systems
- Laboratory mixers
- Heating cabinets
- Suction systems

Communication Capabilities

The Siemens S7-200 CN supports:

- Point-to-point communication
- PLC-to-PLC communication
- HMI integration
- Industrial networking

Advantages of Siemens S7-200 CN

- Easy installation
- Compact architecture
- Cost-effective automation
- Reliable industrial performance
- Flexible expansion capability
- Industrial communication support

Benefits for RAG Chatbot Training

These structured documents are excellent for:

- Vector embeddings
- Semantic similarity search
- Industrial automation Q&A
- Technical support chatbot
- Product recommendation AI
- Troubleshooting AI assistant
- PLC learning assistant

SIEMENS PLC ET 200S – DISTRIBUTED I/O AUTOMATION SYSTEM

The Siemens ET 200S Distributed I/O System is a modular and scalable distributed automation solution designed for industrial environments requiring flexible input/output expansion, compact installation, and reliable industrial communication.

Introduction to Siemens ET 200S

The Siemens ET 200S is a multifunctional distributed I/O system with IP20 protection designed for industrial automation applications. It supports:

- Modular expansion
- PROFINET communication

- PROFIBUS communication
- Integrated CPU functionality
- Compact automation architecture

The ET 200S series allows industries to create decentralized automation systems with high flexibility and simplified installation.

Features of Siemens ET 200S

Modular Architecture

The ET 200S supports highly modular configuration for industrial applications.

Distributed I/O System

Supports remote I/O communication for distributed automation environments.

Integrated CPU Options

Available with integrated CPU modules for standalone control systems.

Compact Design

Requires minimal control panel space.

Industrial Communication

Supports:

- PROFIBUS DP
- PROFINET
- Industrial Ethernet

Rugged Construction

Designed for harsh industrial environments with high mechanical durability.

Advantages of Siemens ET 200S

Reduced Wiring

Permanent wiring architecture reduces installation complexity.

Fast Installation

Quick module replacement and prewiring reduce commissioning time.

High Availability

Modular structure enables easy maintenance and high operational reliability.

Flexible Expansion

Supports:

- Digital input modules
- Digital output modules
- Analog modules
- Technology modules
- Motor starters
- Pneumatic interfaces

Simplified Maintenance

Faulty modules can be replaced without complete rewiring.

Industrial Applications of ET 200S

The Siemens ET 200S is widely used in:

- Packaging plants
- Manufacturing automation
- Conveyor systems
- Material handling systems
- Automotive production
- Process automation
- Machine building

- Food processing plants
- Industrial robotics

Technical Capabilities

Interface Modules

Supports multiple interface modules:

- IM151
- IM152
- IM153
- IM154
- IM155

Communication Protocols

- PROFIBUS DP
- PROFINET
- Ethernet-based automation

Expansion Capacity

Supports up to 62 modules depending on interface configuration.

Distributed Automation

Enables centralized and decentralized industrial automation architecture.

Benefits for Industrial Automation

Flexible System Design

Allows custom industrial automation layouts.

Space Saving

Compact installation reduces panel size requirements.

Lower Downtime

Hot-swappable modular architecture minimizes operational interruption.

Faster Engineering

Simplifies distributed control system deployment.

SIEMENS PLC S7-400 – HIGH-END INDUSTRIAL CONTROLLER

The Siemens S7-400 PLC Series is a high-performance industrial automation controller designed for large-scale industrial applications, process industries, and mission-critical automation systems.

Introduction to Siemens S7-400

The Siemens S7-400 PLC family is built for:

- Large industrial automation systems
- Process control
- High-speed industrial communication
- Redundant automation systems
- Distributed industrial architectures

The S7-400 series supports scalable automation with integrated communication interfaces and advanced modular expansion.

Key Features of Siemens S7-400

High Processing Performance

Supports large and complex industrial automation tasks.

Hot Swapping

Modules can be inserted or removed while the system is operational.

Modular Architecture

Supports flexible industrial configurations.

Integrated Communication

Supports:

- MPI
- PROFIBUS DP
- PROFINET
- Ethernet communication

Redundant Systems

Supports fault-tolerant automation systems using S7-400H architecture.

Industrial Applications of Siemens S7-400

The Siemens S7-400 is used in:

- Power generation plants
- Petrochemical industries
- Oil & gas plants
- Pharmaceutical manufacturing
- Refineries
- Airport automation
- Water treatment plants
- Packaging industries
- Steel plants
- Shipbuilding
- Traffic automation systems
- Process engineering systems

Installation and Architecture

The Siemens S7-400 architecture consists of:

- Power supply
- CPU
- Backplane bus
- Signal modules
- Expansion racks

The modular system supports:

- Centralized automation
- Distributed automation
- Expansion racks
- Redundant systems

Special Functions

Firmware Upgrade via Network

Allows remote firmware updates through engineering stations.

Memory Card Protection

Supports serial-number-based program protection.

Enhanced Write Protection

Protects PLC programs from unauthorized modifications.

CPU Models in Siemens S7-400

Popular CPU series include:

- CPU 412
- CPU 414
- CPU 416

- CPU 417
- S7-400H redundant CPUs
- Fail-safe CPUs

These CPUs support:

- Large working memory
- High-speed communication
- Industrial networking
- Distributed automation

Advantages of Siemens S7-400

High Reliability

Designed for mission-critical industrial environments.

Scalability

Supports small to enterprise-level industrial systems.

Redundancy Support

Provides high system availability.

Advanced Diagnostics

Built-in diagnostics simplify troubleshooting.

SIEMENS PLC S7-1200 – COMPACT INDUSTRIAL AUTOMATION CONTROLLER

The Siemens S7-1200 PLC Series is a compact and flexible automation controller designed for small and medium industrial automation applications.

Introduction to Siemens S7-1200

The Siemens S7-1200 PLC series combines:

- Compact design
- Integrated communication
- Flexible expansion
- Cost-effective automation
- TIA Portal engineering integration

It is widely used for machine automation, process control, and industrial monitoring systems.

Features of Siemens S7-1200

Integrated PROFINET

Built-in PROFINET communication for industrial networking.

Modular Expansion

Supports:

- Signal modules
- Communication modules
- Signal boards

Engineering Efficiency

TIA Portal integration reduces engineering time significantly.

Built-in Diagnostics

Integrated diagnostics improve maintenance efficiency.

Compact Design

Suitable for compact industrial control panels.

CPU Models of Siemens S7-1200

The S7-1200 family includes:

- CPU 1211C
- CPU 1212C
- CPU 1214C
- CPU 1215C
- CPU 1217C
- Fail-safe variants:
  - CPU 1214FC
  - CPU 1215FC

Industrial Applications of S7-1200

Used in:

- Machine automation
- Conveyor systems
- Packaging machines
- Water treatment systems
- Industrial monitoring
- Process automation
- HVAC systems
- Manufacturing plants

Advantages of Siemens S7-1200

Affordable Automation

Provides cost-effective industrial control.

Flexible Configuration

Supports customized industrial automation design.

Fast Commissioning

Integrated diagnostics reduce startup time.

Scalable Architecture

Expandable according to industrial requirements.

Technical Features

Communication

Supports:

- PROFINET
- Ethernet
- Serial communication

I/O Expansion

Supports:

- Digital I/O
- Analog I/O
- Communication modules

PID Functionality

Supports closed-loop industrial process control.

Why S7-1200 is Popular

Industries prefer Siemens S7-1200 because of:

- Easy programming
- Compact structure
- Reliable performance
- Integrated communication

- TIA Portal support
- Cost efficiency
- Flexible expansion

SIMATIC ET 200 SP – MODULAR DISTRIBUTED I/O SYSTEM

The SIMATIC ET 200 SP Distributed I/O System is a highly flexible and scalable industrial distributed I/O platform designed for modern automation systems. It supports compact installation, decentralized automation, high-speed communication, and advanced industrial process integration.

Introduction to SIMATIC ET 200 SP

The Siemens SIMATIC ET 200 SP is an IP20-rated modular distributed I/O system that enables industries to build intelligent automation systems with:

- Flexible expansion
- Distributed architecture
- Compact panel installation
- High-speed industrial communication
- Advanced diagnostics

The ET 200 SP series supports:

- PROFINET
- PROFIBUS
- EtherNet/IP
- Modbus TCP communication

It can operate with:

- Standard PLCs
- Fail-safe PLCs
- Open controllers
- Distributed S7-1500 controllers

Key Features of ET 200 SP

Modular Expansion

Supports flexible addition of:

- Digital input modules
- Digital output modules
- Analog modules
- Safety modules
- Technology modules

Compact Design

Designed for space-saving industrial control panel integration.

Industrial Communication

Supports:

- PROFINET
- PROFIBUS DP
- Ethernet-based communication

High-Speed Automation

Suitable for real-time industrial automation applications.

Robust SIPLUS Versions

Available in rugged SIPLUS versions for extreme industrial environments.

Applications of SIMATIC ET 200 SP

The ET 200 SP system is used in:

- Process engineering
- Automobile manufacturing
- Packaging industries
- Food & beverage plants
- OEM machine manufacturing
- Plastics processing
- Mechanical engineering

- Batch processing systems
- Motion control systems
- PID control systems

Advantages of ET 200 SP

Flexible Automation

Supports scalable automation architectures.

Easy Maintenance

Modular design simplifies replacement and diagnostics.

Distributed Control

Ideal for decentralized industrial automation systems.

Fast Communication

Supports high-speed industrial networking.

Compact Engineering

Reduces control cabinet size and wiring complexity.

Industrial Use Cases

The ET 200 SP platform is commonly used for:

- Pick and place automation
- Automatic batching systems
- Purified water distribution systems
- Ointment manufacturing plants
- Centrifuge automation
- Industrial process monitoring

SIEMENS PLC ET 200 M – MODULAR INDUSTRIAL I/O PLATFORM

The Siemens ET 200 M PLC System is a modular distributed I/O system designed for complex industrial automation applications requiring high-density signal processing, distributed communication, and process engineering capabilities.

Introduction to Siemens ET 200 M

The Siemens ET 200 M is an IP20-rated modular distributed I/O station optimized for:

- SIMATIC S7-300 systems
- SIMATIC S7-400 systems
- Process engineering
- Distributed industrial automation
- High-channel-density applications

The system supports:

- PROFIBUS DP
- PROFINET communication
- HART-enabled modules
- Safety-oriented automation systems

Key Features of ET 200 M

Modular Architecture

Supports multiple:

- Signal modules
- Communication modules
- Function modules
- HART modules

Hot Swapping

Modules can be replaced during live operation without shutting down the system.

Process Engineering Support

Optimized for process industries requiring advanced analog and digital signal handling.

Safety Integration

Supports PROFISAFE-compliant fail-safe automation.

Redundant Systems

Supports redundant S7-400H and fail-safe architectures.

Industrial Applications of ET 200 M

The ET 200 M system is widely used in:

- Process industries
- Pharmaceutical manufacturing
- Food processing
- Packaging industries
- OEM automation
- Mechanical engineering
- Water treatment systems
- Industrial process plants
- Motion control systems

Advantages of Siemens ET 200 M

High Reliability

Designed for mission-critical industrial operations.

Flexible Expansion

Supports high-density I/O integration.

Industrial Networking

Supports high-speed industrial communication.

Simplified Maintenance

Hot-swappable modules reduce operational downtime.

Process Optimization

Supports advanced process automation applications.

SIEMENS HMI KTP 400 BASIC – INDUSTRIAL OPERATOR PANEL

The Siemens HMI KTP 400 BASIC Panel is a compact human-machine interface designed for monitoring and controlling industrial machines and automation systems.

Introduction to Siemens HMI KTP 400 BASIC

The SIMATIC HMI KTP 400 BASIC panel is designed for:

- Small machine automation
- Industrial monitoring
- Operator interaction
- Process visualization
- Alarm handling

It is suitable for:

- Manufacturing industries
- Process industries
- Building automation
- Machine control systems

Features of KTP 400 BASIC

Touch and Key Operation

Supports intuitive industrial operation using:

- Touchscreen interface
- Configurable tactile keys

Compact Display

4-inch TFT display with multiple color options.

Industrial Communication

Supports:

- PROFINET
- Ethernet communication

HMI Functions

Supports:

- Alarm systems
- Recipe management
- Trend curves
- Language switching

Technical Capabilities

Display

- 4-inch TFT display
- Multiple grayscale and color modes

Engineering Integration

Supports:

- WinCC Flexible
- WinCC Basic
- STEP 7 Basic
- TIA Portal

Industrial Connectivity

Integrated PROFINET communication interface.

Applications of KTP 400 BASIC

Used in:

- PLC-based machines
- Industrial monitoring systems
- Packaging machines
- Conveyor automation
- OEM systems
- Process industries

Benefits of KTP 400 BASIC

Compact Design

Ideal for compact control panels.

Easy Engineering

Simple configuration using TIA Portal.

Industrial Reliability

Designed for long industrial operation.

Cost-Effective HMI

Provides affordable visualization for automation systems.

SIEMENS HMI KTP 600 BASIC – INDUSTRIAL TOUCH PANEL

The Siemens HMI KTP 600 BASIC Panel is an industrial operator interface designed for efficient machine visualization and industrial process control.

Introduction to KTP 600 BASIC

The Siemens KTP 600 BASIC panel is designed for:

- Industrial machine monitoring
- Operator control
- Process visualization
- Industrial HMI applications

It is widely used in:

- Manufacturing automation
- Process automation
- Building automation
- Industrial OEM systems

Features of Siemens KTP 600 BASIC

Touchscreen Interface

Provides intuitive industrial operation.

PROFINET Connectivity

Supports Ethernet-based industrial communication.

Flexible Configuration

Supports:

- WinCC Flexible
- STEP 7
- TIA Portal

Alarm and Recipe Management

Supports:

- Industrial alarm handling
- Recipe management
- Trend visualization

Technical Specifications

Display

- 6-inch TFT display
- 320 × 240 resolution

Protection

- Front protection: IP65
- Rear protection: IP20

Interfaces

- RS-485
- RJ45 Ethernet
- PROFINET

Applications of KTP 600 BASIC

Used in:

- Packaging systems
- Conveyor systems
- Industrial monitoring
- PLC visualization

- Water treatment systems
- OEM machine control

Advantages of KTP 600 BASIC

Industrial Durability

Built for industrial operating environments.

User-Friendly Operation

Simple touchscreen navigation.

Reliable Communication

Supports stable industrial Ethernet communication.

Compact Engineering

Suitable for small and medium industrial systems.

SIEMENS HMI KTP 1000 BASIC – INDUSTRIAL TOUCH OPERATOR PANEL

The Siemens HMI KTP 1000 BASIC Panel is a powerful industrial human-machine interface designed for machine monitoring, visualization, and process control applications. It combines touchscreen operation, industrial communication, and visualization functionality for modern automation systems.

Introduction to Siemens KTP 1000 BASIC

The Siemens SIMATIC KTP 1000 BASIC panel belongs to the Siemens Basic Panel family and is designed for:

- Machine visualization
- Industrial process monitoring

- Operator interaction
- Alarm management
- Production system control

The panel is suitable for:

- Manufacturing industries
- Process automation
- OEM machine building
- Packaging systems
- Water treatment systems
- Industrial production lines

Features of Siemens KTP 1000 BASIC

Large Industrial Display

- 10-inch TFT touchscreen display
- 256-color visualization
- High-quality industrial graphics

Touch and Key Operation

Supports both:

- Touchscreen operation
- Function key interaction

Industrial Communication

Supports:

- PROFINET communication
- MPI/PROFIBUS DP interfaces
- Ethernet connectivity

Built-In HMI Functions

Includes:

- Alarm logging

- Recipe management
- Trend graphs
- Language switching
- Process visualization

Technical Specifications

Display Features

- 10-inch TFT display
- Industrial-grade touchscreen
- Pixel-based visualization system

Protection Rating

- IP65 front protection
- Suitable for industrial environments

Engineering Software

Configurable using:

- WinCC Flexible
- WinCC Basic
- STEP 7 Basic
- Siemens TIA Portal

Applications of KTP 1000 BASIC

The Siemens KTP 1000 BASIC is used in:

- Packaging automation
- PLC machine interfaces
- Industrial process monitoring
- Conveyor systems
- Filling systems
- Batch control systems
- Industrial OEM equipment

Advantages of Siemens KTP 1000 BASIC

Easy Visualization

Provides clear industrial process visualization.

Compact Engineering

Reduces engineering complexity using TIA Portal.

Industrial Reliability

Designed for continuous industrial operation.

Flexible Integration

Works seamlessly with Siemens PLC systems.

Industrial Automation Benefits

Industries use the KTP 1000 BASIC panel because of:

- User-friendly operation
- Industrial durability
- Efficient diagnostics
- Reliable communication
- Easy maintenance
- Cost-effective HMI integration

SIEMENS HMI KTP 1500 BASIC – ADVANCED INDUSTRIAL VISUALIZATION PANEL

The Siemens HMI KTP 1500 BASIC Panel is an advanced industrial operator panel designed for high-quality machine monitoring, industrial visualization, and operator control applications.

Introduction to Siemens KTP 1500 BASIC

The Siemens KTP 1500 BASIC is a large-screen industrial HMI panel designed for:

- Machine control
- Industrial visualization
- Process monitoring
- Alarm handling
- Production line operation

It supports:

- Touch operation
- PROFINET communication
- TIA Portal engineering
- Real-time industrial monitoring

Key Features of KTP 1500 BASIC

Large 15-Inch TFT Display

Provides enhanced industrial visualization for complex automation systems.

Industrial Touchscreen

Supports intuitive operator interaction.

Industrial Networking

Supports:

- PROFINET communication
- Ethernet integration
- PLC connectivity

HMI Functionalities

Includes:

- Alarm logging
- Recipe handling
- Trend monitoring
- Language switching
- Real-time visualization

Technical Specifications

Display

- 15-inch TFT display
- 1024 × 768 resolution
- 256-color visualization

Power Requirements

- 24V DC input supply

Protection

- IP65 front protection
- IP20 rear protection

Engineering Environment

Supports:

- STEP 7 Basic
- WinCC Basic
- Siemens TIA Portal

Applications of Siemens KTP 1500 BASIC

Used in:

- Industrial production systems
- Packaging automation
- Oil filtration plants
- Heat treatment systems
- Process engineering
- Pharmaceutical industries
- Water treatment plants
- PLC automation systems

Benefits of KTP 1500 BASIC

Large Process Visualization

Improves operator visibility and monitoring efficiency.

Advanced Industrial Control

Suitable for medium and large automation systems.

Reliable Communication

Supports stable industrial Ethernet communication.

Easy Integration

Integrates seamlessly with Siemens PLC and SCADA systems.

SIEMENS HMI KTP 400 2ND GENERATION – COMPACT INDUSTRIAL HMI PANEL

The Siemens HMI KTP 400 2nd Generation is a compact industrial HMI panel designed for efficient machine operation and process visualization in industrial environments.

Introduction to KTP 400 2nd Generation

The Siemens KTP 400 2nd Generation panel provides:

- Touchscreen operation
- Key-based operation
- Compact industrial visualization
- Ethernet communication
- PROFINET connectivity

It is widely used in:

- Compact industrial machines
- OEM systems
- Small automation systems
- Industrial process monitoring

Features of KTP 400 2nd Generation

Compact Industrial Design

Space-saving HMI suitable for compact control panels.

TFT Display

- 4-inch TFT display
- 65,536 colors
- Industrial visualization support

Industrial Communication

Supports:

- PROFINET interface
- Ethernet communication

TIA Portal Integration

Configurable using:

- WinCC Basic V13
- STEP 7 Basic V13

Technical Details

Model Information

- Model: 6AV2123-2DB03-0AX0
- Country of Manufacture: Germany

Operation Modes

Supports:

- Touch operation
- Key operation

Industrial Durability

Built for harsh industrial environments.

Applications

Used in:

- Conveyor automation
- Packaging systems
- Industrial OEM machines
- PLC control systems
- Process automation

Advantages

Compact Size

Ideal for limited panel space.

User-Friendly Interface

Simple operator interaction.

Industrial Stability

Reliable long-term industrial performance.

SIEMENS HMI KTP 700 2ND GENERATION – INDUSTRIAL BASIC PANEL

The Siemens HMI KTP 700 2nd Generation is a modern industrial HMI panel designed for machine operation, process monitoring, and automation visualization systems.

Introduction to Siemens KTP 700 2nd Generation

The Siemens KTP 700 BASIC panel is designed for:

- Industrial visualization
- PLC monitoring
- Machine operation
- Process control
- Industrial operator interfaces

It combines:

- Touchscreen operation
- PROFINET communication
- Industrial visualization
- Siemens TIA Portal engineering

Key Features of KTP 700 2nd Generation

7-Inch TFT Display

Provides high-quality industrial visualization.

Touch and Key Operation

Supports easy machine interaction.

Industrial Ethernet

Supports:

- PROFINET communication
- Ethernet networking

TIA Portal Engineering

Configurable through:

- STEP 7 Basic
- WinCC Basic
- Siemens TIA Portal

Technical Specifications

Product Information

- Part Number: 6AV2123-2GB03-0AX0
- RoHS compliant
- Industrial-grade construction

Communication

Supports:

- PROFINET
- Ethernet communication

Industrial Compliance

Designed for industrial automation standards.

Industrial Applications

The Siemens KTP 700 2nd Generation is used in:

- Oil filtration plants
- Packaging systems
- Pick and place automation
- Heat treatment systems
- Textile synchronization systems
- Ointment manufacturing plants
- Automatic batching systems
- Liquid filling and sealing systems
- Industrial distribution systems

Advantages of KTP 700 2nd Generation

Reliable Industrial Visualization

Provides stable machine monitoring.

Flexible Integration

Works seamlessly with Siemens PLC systems.

Enhanced Operator Experience

Improves industrial process interaction.

Cost-Effective HMI

Provides industrial visualization at optimized cost.

SIEMENS HMI KTP 900 2nd Generation – INDUSTRIAL BASIC PANEL

The Siemens HMI KTP 900 2nd Generation is an advanced industrial HMI panel designed for medium-performance automation systems. It provides efficient visualization, touchscreen interaction, and reliable communication with Siemens PLC controllers.

Introduction to Siemens KTP 900 2nd Generation

The Siemens SIMATIC KTP900 BASIC panel is developed for:

- Industrial machine operation
- Process visualization
- Automation monitoring
- PLC interaction
- Industrial control systems

It is highly suitable for:

- SIMATIC S7-1200 controllers
- PROFINET-based automation systems
- Medium-sized industrial applications

Key Features

9-Inch Widescreen Display

- Large TFT touchscreen
- 65,536 color display
- High-quality industrial graphics

Touch and Key Operation

Supports:

- Touchscreen control
- Function keys for industrial operation

Industrial Communication

Supports:

- PROFINET communication
- Ethernet networking
- Siemens PLC integration

Engineering Software

Configurable using:

- WinCC Basic V13
- STEP 7 Basic V13
- Siemens TIA Portal

Technical Specifications

Product Information

- Part Number: 6AV2123-2JB03-0AX0
- Net Weight: 1.13 kg
- Country of Origin: China
- RoHS Compliant

Display

- 9-inch TFT display
- 65,536 colors
- Industrial touchscreen

Applications

Used in:

- Industrial process monitoring
- Packaging systems
- Distribution systems
- Centrifuge automation
- Water treatment systems
- Pick and place automation
- Ointment manufacturing plants

Advantages

Easy Machine Visualization

Provides clear and efficient process monitoring.

Reliable Industrial Networking

Ensures stable communication with PLC systems.

User-Friendly Interface

Improves operator efficiency and machine handling.

Industrial Durability

Designed for long-term industrial usage.

SIEMENS HMI KTP 1200 2nd Generation – ADVANCED INDUSTRIAL PANEL

The Siemens HMI KTP 1200 2nd Generation is a professional industrial HMI solution designed for advanced automation and visualization applications.

Introduction to Siemens KTP 1200

The Siemens KTP1200 BASIC panel supports:

- Industrial machine monitoring
- Process visualization
- Operator interaction
- PLC communication
- Real-time automation control

It is designed for:

- Medium and upper-range S7-1200 controller systems
- PROFINET and PROFIBUS industrial networks

Key Features

12-Inch Widescreen Display

- Industrial-grade TFT touchscreen
- 65,536 colors
- High-resolution visualization

Dual Communication Support

Supports:

- PROFINET
- PROFIBUS DP

Touch and Key Operation

Provides:

- Touchscreen interaction
- Function key support

TIA Portal Engineering

Configurable using:

- WinCC Basic V13
- STEP 7 Basic V13

- Siemens TIA Portal

Technical Specifications

Product Information

- Part Number: 6AV2123-2MA03-0AX0
- Net Weight: 1.7 kg
- Country of Origin: China
- RoHS Compliant

Display

- 12-inch TFT display
- Industrial touchscreen panel

Industrial Applications

Used in:

- Industrial automation systems
- Packaging machines
- Pick and place systems
- PLC control systems
- Water treatment automation
- Production line monitoring

Benefits

Large Process Visualization

Improves monitoring efficiency.

Flexible Network Integration

Supports multiple industrial protocols.

Reliable Performance

Designed for continuous industrial operation.

SIEMENS HMI KTP 400 Comfort – COMPACT INDUSTRIAL HMI

The Siemens HMI KTP 400 Comfort is a compact industrial HMI panel designed for machine visualization and operator control in industrial environments.

Features of KTP 400 Comfort

Compact Design

Ideal for:

- Small control panels
- Compact industrial machines
- OEM applications

Industrial Communication

Supports reliable PLC communication.

Visualization

Provides industrial process monitoring and machine interaction.

Applications

Used in:

- Pick and place automation
- Packaging systems
- Water distribution systems
- Industrial process control
- PLC-based automation systems

Advantages

Space Efficient

Suitable for compact automation systems.

Industrial Reliability

Provides stable long-term performance.

User-Friendly Operation

Simple interface for operators.

SIEMENS HMI TP 700 Comfort – HIGH PERFORMANCE INDUSTRIAL PANEL

The Siemens HMI TP 700 Comfort is a premium industrial comfort panel designed for advanced visualization and automation control systems.

Introduction to TP700 Comfort

The Siemens TP700 Comfort panel offers:

- 7-inch widescreen TFT display
- Touchscreen operation
- 16 million colors
- Industrial communication interfaces

It supports:

- PROFINET
- MPI/PROFIBUS DP
- WinCC Comfort engineering

Technical Specifications

Product Information

- Product Number: 6AV2124-0GC01-0AX0
- 12 MB user memory
- Windows CE 6.0 operating system
- Country of Origin: Germany

Engineering Environment

Supports:

- WinCC Comfort V11
- Siemens TIA Portal

Applications

Used in:

- Packaging systems
- Pick and place automation
- Water treatment plants
- Industrial production systems
- Centrifuge automation

Benefits

Premium Visualization

Provides high-quality industrial graphics.

Advanced Communication

Supports multiple industrial communication protocols.

Industrial Stability

Reliable for continuous factory operation.

SIEMENS HMI TP 1200 Comfort – ADVANCED COMFORT PANEL

The Siemens HMI TP 1200 Comfort is an advanced industrial HMI designed for high-performance industrial automation and visualization systems.

Features of TP1200 Comfort

12-Inch Widescreen Display

- Touchscreen operation
- 16 million colors
- Industrial visualization

Industrial Communication

Supports:

- PROFINET
- MPI/PROFIBUS DP

Operating System

- Windows CE 6.0

Engineering

Configurable using:

- WinCC Comfort V11
- Siemens TIA Portal

Applications

Used in:

- Production automation
- Industrial batching systems
- Packaging systems
- Heat treatment plants
- Water treatment systems
- PLC-based industrial applications

Benefits

Enhanced Operator Experience

Large display improves industrial monitoring.

Flexible PLC Integration

Works seamlessly with Siemens automation products.

Reliable Industrial Operation

Built for heavy-duty industrial usage.

SIEMENS HMI TP 1500 Comfort – ENTERPRISE INDUSTRIAL HMI

The Siemens HMI TP 1500 Comfort is a large industrial comfort panel designed for enterprise-level machine visualization and industrial automation systems.

Introduction to TP1500 Comfort

The Siemens TP1500 Comfort panel is suitable for:

- Large automation systems
- Industrial visualization
- Production monitoring
- Enterprise-level process control

Industrial Features

Advanced Visualization

Provides large-screen industrial monitoring.

Industrial Communication

Supports integration with:

- Siemens PLC systems
- Industrial Ethernet networks
- Automation systems

Industrial Applications

Used in:

- Oil filtration plants
- Packaging automation
- Heat treatment systems
- Textile synchronization
- Automatic batching systems
- Industrial process plants

Benefits

Enterprise Visualization

Ideal for complex industrial processes.

Flexible Integration

Works efficiently with Siemens automation products.

Industrial Performance

Reliable operation in demanding environments.

SIEMENS SIMATIC HMI KP 1200 COMFORT – INDUSTRIAL PC-BASED AUTOMATION

The Siemens SIMATIC HMI KP 1200 Comfort supports advanced PC-based industrial automation systems and industrial computing solutions.

Features

Industrial PCs

Supports:

- Rack PCs
- Box PCs
- Panel PCs
- Industrial tablets

Industrial Automation

Provides:

- PC-based control
- Industrial visualization

- Integrated automation systems

Siemens IPC Systems

Supports:

- SIMATIC IPC277E
- SIMATIC IPC277D
- SIMATIC IPC377E

Applications

Used in:

- Industrial automation
- Smart manufacturing
- Factory monitoring
- Industrial IoT systems
- High-performance machine control

SIEMENS HMI UNIFIED PANEL – NEXT GENERATION INDUSTRIAL VISUALIZATION

The Siemens HMI Unified Panel is a next-generation industrial HMI solution designed for high-speed, modern industrial visualization systems.

Key Features of Unified Panel

Modern Visualization

Provides:

- High-speed UI

- Modern touchscreen experience
- Advanced industrial graphics

WinCC Unified Integration

Supports:

- SIMATIC WinCC Unified
- TIA Portal V18 Update 3

JavaScript Support

Allows:

- Advanced scripting
- Flexible customization
- Web-based visualization

Web-Based Remote Access

Supports:

- Browser-based visualization
- Remote monitoring
- HTML5 web client

Industrial Security

Built using:

- SIMATIC Industrial OS
- Advanced industrial cybersecurity features

Supported Controllers

Compatible with:

- Siemens S7-1200
- Siemens S7-1500

- Siemens S7-300/400

Benefits

Modern Industrial HMI

Provides next-generation operator interaction.

Remote Accessibility

Supports web-based industrial visualization.

Scalable Architecture

Suitable for both small and enterprise automation systems.

SIEMENS VFD MM440 – HIGH PERFORMANCE INDUSTRIAL DRIVE

The Siemens VFD MM440 is a powerful variable frequency drive designed for industrial applications that require advanced control, high dynamic response, and reliable motor performance.

Introduction to Siemens MICROMASTER 440

The Siemens MICROMASTER 440 is specially designed for:

- Complex industrial applications
- Dynamic load handling
- High-performance motor control
- Industrial automation systems

It supports:

- Vector control technology

- Encoder-less positioning
- Fast response applications

Key Features

Advanced Vector Control

Provides:

- Stable motor performance
- Precise speed control
- Better load handling

Flexible Configuration

Supports:

- Modular expansion
- Programmable I/O
- Analog and digital interfaces

Integrated Brake Chopper

Ensures:

- Accurate braking
- Short deceleration ramps
- Smooth stopping performance

Industrial Protection

Includes:

- Motor protection
- Overload protection
- Inverter safety functions

Technical Specifications

Voltage Range

- 200–240V
- 380–480V
- 500–600V

Power Range

- 0.12 kW to 250 kW

Communication

Supports industrial automation integration and flexible machine control.

Industrial Applications

Used in:

- Conveyor systems
- Packaging machinery
- Pump control
- Industrial mixers
- Centrifuge systems
- Heavy-duty automation

Benefits

High Dynamic Response

Handles sudden load changes effectively.

Reliable Industrial Operation

Designed for continuous factory environments.

Energy Efficient

Optimizes motor performance and power usage.

SIEMENS VFD MM430 – INDUSTRIAL PUMP AND FAN DRIVE

The Siemens VFD MM430 is a specialized industrial drive solution designed primarily for pumps, fans, and variable torque applications.

Introduction to MICROMASTER 430

The Siemens MM430 inverter is ideal for:

- Industrial pump systems
- HVAC systems
- Fan applications
- Variable speed motor control

It offers:

- Easy installation
- Flexible operation
- Process optimization

Main Features

User-Friendly Commissioning

Provides:

- Easy setup
- Simple programming
- Fast configuration

Advanced Motor Control

Supports:

- Linear V/F control
- Quadratic V/F control
- PID process control

Pump Cascade Logic

Allows:

- Multi-pump management
- Energy-efficient operation
- Automated motor staging

Protection Features

Includes:

- Overvoltage protection
- Undervoltage protection
- Thermal protection
- Earth fault protection
- Short-circuit protection

Applications

Used in:

- Water treatment plants
- HVAC systems
- Industrial ventilation
- Cooling towers
- Pumping systems

Benefits

Energy Saving

Optimized for variable torque applications.

Industrial Reliability

Stable performance in industrial conditions.

Flexible Integration

Works efficiently with industrial automation systems.

SIEMENS VFD MM420 – FLEXIBLE INDUSTRIAL INVERTER

The Siemens VFD MM420 is a versatile industrial frequency inverter designed for flexible motor control and industrial automation systems.

Introduction to MICROMASTER 420

The Siemens MM420 is developed for:

- Industrial automation
- Flexible machine control
- General-purpose drive applications

It supports:

- Three-phase motor control
- Industrial networking
- Modular drive configuration

Key Features

Compact Design

- Small installation footprint
- Easy panel mounting
- Space-saving structure

Flexible I/O

Supports:

- Analog inputs
- Digital inputs
- Industrial communication modules

Advanced Motor Functions

Provides:

- Automatic restart
- Compound braking
- Resonance reduction
- Controlled acceleration and deceleration

Applications

Used in:

- Conveyor belts
- Industrial fans
- Production machinery
- Pump systems
- Packaging automation

Benefits

Easy Installation

Simple commissioning and maintenance.

Reliable Performance

Stable motor operation in industrial environments.

Flexible Expansion

Supports additional communication and control modules.

SIEMENS VFD V20 – COMPACT GENERAL PURPOSE DRIVE

The Siemens VFD V20 is an economical and easy-to-use drive system designed for basic industrial automation requirements.

Introduction to SINAMICS V20

The Siemens SINAMICS V20 offers:

- Quick commissioning
- Cost-effective operation
- Industrial robustness
- Flexible motor control

Main Features

Easy Installation

Supports:

- Wall mounting
- Push-through mounting
- Side-by-side installation

Industrial Communication

Supports:

- USS protocol
- Modbus RTU

Energy Saving Functions

Includes:

- ECO mode
- Hibernation mode
- DC coupling

Applications

Used in:

- Solar pumps
- Elevators
- Treadmills
- Conveyor systems
- Tower cranes
- Stone cutting machines
- Food processing systems
- Packaging systems

Benefits

Cost Efficient

Ideal for budget-friendly automation projects.

Energy Optimization

Reduces industrial power consumption.

Compact Structure

Suitable for smaller control cabinets.

SIEMENS SINAMICS V90 SERVO DRIVE SYSTEM

The Siemens SINAMICS V90 Servo Drive System is a high-performance servo solution designed for precise motion control and industrial automation.

Introduction to V90 Servo System

The Siemens V90 system includes:

- SINAMICS V90 servo drive
- SIMOTICS S-1FL6 servomotor

It supports:

- Single-phase and three-phase operation
- Dynamic positioning
- Motion control applications

Key Features

Optimized Servo Performance

Provides:

- Smooth motion control
- Accurate positioning
- Dynamic processing

TIA Portal Integration

Compatible with:

- SIMATIC S7-1500
- SIMATIC S7-1200
- Siemens TIA Portal

PROFINET Support

Supports industrial Ethernet communication for advanced automation.

Applications

Used in:

- Positioning systems
- Winding machines
- Transport systems
- Robotics
- Packaging automation
- CNC systems

Benefits

High Precision

Excellent positioning accuracy.

Industrial Reliability

Stable long-term industrial performance.

Flexible Integration

Works seamlessly with Siemens automation platforms.

SIEMENS SINAMICS G120 AC DRIVE

The Siemens SINAMICS G120 AC Drive is a modular industrial drive solution designed for multi-purpose automation and motion control applications.

Features of SINAMICS G120

Modular Architecture

Includes:

- Expandable I/O
- Flexible communication
- Modular power electronics

Advanced Control

Supports:

- Vector control
- Closed-loop control
- Open-loop control

Industrial Safety

Includes:

- STO safety functions
- Thermal monitoring
- Fault protection

Applications

Used in:

- Pumps
- Compressors
- Conveyors
- Robotics
- Motion control systems
- Industrial machinery

Benefits

High Efficiency

Reduces energy consumption.

Scalable System

Suitable for multiple industrial environments.

Industrial Performance

Reliable for demanding applications.

SIEMENS SINAMICS G120C – COMPACT INDUSTRIAL DRIVE

The Siemens SINAMICS G120C is a compact frequency converter designed for machine manufacturers requiring efficient and space-saving drive systems.

Main Features

Compact Design

- Space-saving construction
- Integrated braking chopper
- Side-by-side mounting

Smart Connectivity

Supports:

- PROFINET
- PROFIBUS

- EtherNet/IP
- Modbus RTU

Wireless Commissioning

Supports mobile diagnostics using Smart Access modules.

Applications

Used in:

- Conveyor systems
- Gear pumps
- Crushers
- Packaging systems
- Centrifuges
- Industrial fans

Benefits

Easy Commissioning

Fast installation and parameter setup.

Energy Efficient

Optimized vector control for better performance.

Industrial Safety

Integrated Safe Torque Off functionality.

SIEMENS G120X – INDUSTRIAL INFRASTRUCTURE DRIVE

The Siemens G120X is an advanced converter series developed for infrastructure, water treatment, and building automation systems.

Features

Optimized for Pumps and Fans

Specially developed for:

- Water systems
- HVAC systems
- Compressor applications

Smart User Interface

Supports:

- Intelligent Operator Panel
- WLAN web server access
- Remote diagnostics

Industrial Integration

Provides:

- PROFINET connectivity
- Ethernet/IP integration
- Flexible industrial automation

Applications

Used in:

- Water and wastewater plants
- Building automation
- Food and beverage industry
- Packaging systems
- Mechanical engineering

Benefits

Efficient Industrial Control

Reliable pump and fan operation.

Easy Monitoring

Remote configuration and diagnostics support.

Robust Industrial Design

Designed for continuous infrastructure operation.

SIEMENS VFD G130 – HIGH POWER INDUSTRIAL DRIVE

The Siemens VFD G130 is a modular high-power AC drive system designed for large industrial machinery and plant automation.

Main Features

Modular Drive System

Includes:

- Power modules
- Control units
- Operator panels

High Power Range

Supports:

- 110 kW to 800 kW applications

Advanced Control

Supports:

- Encoder vector control
- V/F control
- PROFIBUS communication

Applications

Used in:

- Industrial plants
- Heavy-duty conveyors
- Compressors
- Process automation
- Large pump systems

Benefits

High Performance

Suitable for demanding industrial processes.

Reliable Protection

Includes thermal and fault monitoring.

Flexible Industrial Configuration

Supports multiple industrial communication systems.

SIEMENS VFD V90 – MOTION CONTROL DRIVE

The Siemens VFD V90 is a precision motion control drive system optimized for automation and servo applications.

Features

Automatic Auto-Tuning

Provides:

- Self-optimization
- Resonance suppression
- Stable operation

Flexible Communication

Supports:

- Modbus RTU
- PROFINET
- USS
- PTI

Dynamic Motion Control

Designed for:

- Precision positioning
- High-speed motion
- Automation systems

Applications

Used in:

- Motion control systems
- Packaging machines
- Robotics
- Conveyor automation
- Industrial positioning

Benefits

Precise Performance

Excellent speed and positioning control.

Industrial Flexibility

Supports multiple industrial communication protocols.

Reliable Servo Operation

Built for continuous industrial usage.

SIEMENS VFD S120 – HIGH PERFORMANCE MOTION CONTROL DRIVE

The Siemens SINAMICS S120 is a powerful and flexible drive system designed for advanced motion control applications. It is specially developed for machine tools, automation systems, and multi-axis industrial machinery where high precision and dynamic performance are required. □filecite□turn7file0□

Introduction to SINAMICS S120

The SINAMICS S120 Combi drive system combines:

- Line infeed
- Power modules
- Encoder interface

- Regenerative feedback capability

into a single compact solution.

It is suitable for:

- Turning machines
- Milling machines
- Multi-axis motion systems
- Servo automation applications

Key Features

Compact and Robust Design

- Space-saving construction
- External air cooling support
- Reduced cabinet heat generation
- Easy installation and maintenance

Multi-Axis Motion Control

Supports:

- 3 to 6 axis configurations
- Feed and spindle motor control
- Integrated motor brake control

Advanced Safety Functions

Includes:

- Safety Integrated functions
- Regenerative feedback capability
- Reliable industrial protection

Industrial Connectivity

Compatible with:

- TTL encoder interface

- Siemens automation systems
- Industrial machine control platforms

Technical Specifications

Voltage Range

- 380–480V AC

Power Module Support

Available for multiple industrial load capacities and machine configurations.

Cooling System

- External air cooling
- Integrated fan monitoring

Supply Types

Supports:

- IT systems
- TN systems
- TT systems

Industrial Applications

Used in:

- CNC machines
- Turning machines
- Milling machines
- Packaging automation
- Pick and place systems
- Industrial robotics
- Conveyor automation
- Motion control systems

Benefits

High Precision Motion Control

Provides accurate speed and positioning performance.

Energy Efficient Operation

Regenerative feedback helps optimize energy usage.

Flexible System Integration

Suitable for complex industrial automation environments.

Reliable Industrial Performance

Designed for continuous heavy-duty industrial operation.

□filecite□turn7file0□

SIEMENS WINCC SERVER – INDUSTRIAL SCADA AND MONITORING SYSTEM

Siemens WinCC Server is an advanced SCADA and monitoring platform developed for industrial automation systems that require centralized control, monitoring, and data management across multiple operator stations. □filecite□turn7file2□

Introduction to Siemens WinCC Server

The Siemens WinCC Server solution allows multiple operator stations to monitor and control the same industrial process through a centralized SCADA system.

The server provides:

- Real-time process monitoring
- Data archiving
- Alarm management
- Distributed operator access
- Industrial reporting and visualization

Key Features

Multi-User SCADA Architecture

Supports:

- Multiple operator stations
- Distributed monitoring systems
- Client/server architecture
- Centralized industrial control

Real-Time Data Management

Provides:

- Process data handling
- Message logging
- Archive management
- Industrial event tracking

Scalable Industrial Solution

Supports:

- Single-user systems
- Multi-server systems
- Up to 18 WinCC servers
- Remote web client configuration

Secure Industrial Operation

Includes:

- User access control
- Industrial security support
- Secure operator authentication

Functions and Capabilities

Centralized Monitoring

The server manages:

- Automation communication
- Client coordination
- Industrial data archives
- Process visualization

Distributed Client Access

Clients can:

- Access multiple servers
- Monitor industrial processes remotely
- View alarms and historical data
- Operate machines securely

Industrial Data Archiving

Supports:

- SQL-based storage
- Long-term archive management
- Historical process analysis

Licensing

The WinCC Server system requires:

- WinCC Server License
- WinCC Runtime License
- WinCC Client License for each client station

Industrial Applications

Used in:

- Process industries
- Water treatment plants
- Oil filtration systems
- Packaging automation
- Textile industries
- Heat treatment systems
- Manufacturing plants
- Industrial monitoring systems

Benefits

Centralized Industrial Control

Manage multiple industrial systems from one platform.

High Scalability

Expand from small SCADA systems to enterprise-level monitoring.

Reliable Data Management

Ensures secure storage of process and alarm information.

Improved Productivity

Provides faster monitoring, troubleshooting, and industrial decision-making.

□filecite□turn7file2□

SIEMENS WINCC AUDIT – INDUSTRIAL AUDIT TRAIL AND COMPLIANCE SYSTEM

Siemens WinCC Audit is a specialized industrial software solution designed for tracking operator actions, project changes, and maintaining secure audit trails within automation systems. □filecite□turn7file3□

Introduction to WinCC Audit

WinCC Audit records:

- Operator activities
- Runtime changes
- Engineering modifications
- Project version changes
- Recipe operations

The system stores all audit information securely in an audit trail database.

Key Features

Audit Trail Recording

Tracks:

- User actions
- Project modifications
- Configuration changes
- Runtime operations

Secure Data Storage

Provides:

- Tamper-proof audit records

- Secure database storage
- Long-term historical tracking

FDA and Compliance Support

Supports:

- 21 CFR Part 11 compliance
- EU 178/2002 standards
- Industrial validation processes

Audit Viewer

Allows operators to:

- Filter audit records
- View historical changes
- Export reports to Excel
- Monitor industrial events

Monitoring Capabilities

Runtime Monitoring

Records:

- Pushbutton operations
- Recipe modifications
- User login activities
- Process events

Project Change Monitoring

Tracks:

- Configuration updates
- Script changes
- Screen modifications
- Database changes

Version Management

Supports:

- Project archiving
- Rollback functionality
- Project restoration
- Change documentation

Industrial Applications

Used in:

- Pharmaceutical industries
- Food processing plants
- Packaging systems
- Manufacturing industries
- Automated process plants
- Industrial compliance systems

Benefits

Complete Traceability

Tracks all industrial operator and project activities.

Enhanced Compliance

Simplifies industrial regulatory requirements.

Secure Audit Management

Protects critical industrial data from unauthorized modification.

Reduced Engineering Effort

Helps simplify validation and compliance documentation.

□filecite□turn7file3□

SICK PHOTOELECTRIC SENSORS – INDUSTRIAL OBJECT DETECTION SYSTEM

The SICK Photoelectric Sensors are advanced industrial sensing devices used for object detection, distance measurement, presence sensing, and automation control in modern industrial environments.

Grups Automation is a leading distributor, supplier, trader, and stockist of SICK Identification Solutions and industrial sensing products.

Introduction to SICK Photoelectric Sensors

Photoelectric sensors use:

- Light transmitters
- Infrared technology
- Photoelectric receivers

to detect the:

- Presence of objects
- Absence of objects
- Distance of targets
- Movement of materials

These sensors are widely used in:

- Industrial automation
- Manufacturing systems
- Packaging industries
- Conveyor systems
- Material handling systems

Working Principle

The sensor system mainly consists of:

- Transmitter
- Receiver
- Detection circuit

The transmitter emits infrared or visible light, and the receiver detects changes in reflected or interrupted light signals to identify objects.

Features of SICK Photoelectric Sensors

High Detection Accuracy

Provides precise object sensing in industrial environments.

Non-Contact Detection

Enables reliable sensing without physical contact.

Fast Response Time

Supports high-speed industrial automation.

Industrial Durability

Designed for harsh factory conditions.

Multiple Detection Modes

Supports:

- Through-beam sensing
- Retro-reflective sensing
- Diffuse sensing

Industrial Applications

Used in:

- Conveyor automation

- Packaging machinery
- Counting systems
- Bottle detection
- Industrial robotics
- Material handling systems
- Production monitoring

Benefits

Reliable Detection

Provides stable performance in industrial environments.

Reduced Mechanical Wear

Non-contact operation improves equipment life.

Easy Integration

Works efficiently with PLC and automation systems.

SICK INDUCTIVE PROXIMITY SENSORS – METAL DETECTION SOLUTION

The SICK Inductive Proximity Sensors are industrial non-contact sensors used for detecting metallic objects using electromagnetic induction principles.

Introduction to Inductive Proximity Sensors

Inductive sensors generate an electromagnetic field to detect metal objects without physical contact.

These sensors are ideal for:

- Industrial automation

- Machine safety
- Position sensing
- Metal object detection

Features

Electromagnetic Detection

Detects metallic targets accurately.

Non-Contact Operation

Works without touching the target object.

Resistant to Dust and Moisture

Suitable for:

- Wet conditions
- Dusty environments
- Industrial factory applications

High Reliability

Provides stable industrial sensing performance.

Applications

Used in:

- CNC machines
- Conveyor systems
- Packaging machinery
- Industrial automation systems
- Manufacturing equipment
- Position detection systems

Benefits

Long Sensor Life

No physical wear due to non-contact sensing.

Stable Detection

Reliable performance in industrial environments.

Easy Installation

Simple mounting and automation integration.

SICK ENCODERS – INDUSTRIAL MOTION FEEDBACK DEVICE

The SICK Industrial Encoders are precision sensing devices used for measuring:

- Speed
- Position
- Direction
- Rotation angle
- Motion control feedback

Introduction to Encoders

Encoders convert mechanical motion into electrical signals that can be interpreted by:

- PLC systems
- Motion controllers
- Industrial automation systems

These devices are essential for:

- High-accuracy positioning
- Speed monitoring

- Servo systems
- Motion automation

Features

High Precision Feedback

Provides accurate rotational and positional data.

Speed Monitoring

Supports industrial motor speed control.

Motion Detection

Tracks:

- Direction
- Rotation
- Position changes

Industrial Compatibility

Works with:

- Servo drives
- PLC systems
- Automation controllers

Applications

Used in:

- Robotics
- CNC systems
- Conveyor automation
- Packaging machinery
- Motion control systems

- Servo applications

Benefits

Accurate Motion Control

Improves industrial automation precision.

Reliable Industrial Operation

Designed for long-term industrial use.

Flexible Integration

Compatible with multiple automation platforms.

SICK ACCESSORIES – INDUSTRIAL SENSOR ACCESSORIES

The SICK Sensor Accessories include industrial mounting systems, electrical connectors, reflectors, and integration accessories designed for reliable industrial sensor deployment.

Features

Wide Accessory Range

Includes:

- Connectors
- Reflectors
- Mounting brackets
- Mechanical supports

Industrial Compatibility

Fully compatible with SICK industrial sensors.

Fast Installation

Simplifies industrial sensor deployment.

Customized Solutions

Supports application-specific industrial integration.

Applications

Used in:

- Sensor mounting
- Industrial machine integration
- Automation systems
- Factory installations

Benefits

Improved Sensor Stability

Ensures secure industrial installation.

Faster Integration

Reduces installation time.

Enhanced Reliability

Improves industrial system performance.

SICK COLOR SENSORS – INDUSTRIAL COLOR DETECTION SYSTEM

The SICK Color Sensors are industrial sensing devices designed for detecting and differentiating colors in automation systems.

Introduction to Color Sensors

Color sensors detect object colors using:

- Red light
- Green light
- Blue light (RGB)

These sensors analyze reflected light to identify color differences.

Features

RGB Color Detection

Accurate color sensing using RGB technology.

IR and UV Rejection Filters

Improves sensing accuracy by eliminating unwanted light interference.

Fast Response

Suitable for high-speed industrial production systems.

Applications

Used in:

- Packaging industries
- Printing systems
- Product sorting
- Label verification
- Quality inspection systems

Benefits

Accurate Color Identification

Ensures reliable production quality.

Industrial Stability

Designed for industrial manufacturing environments.

Automation Efficiency

Supports automated sorting and inspection.

SICK ARRAY SENSORS – EDGE AND GAP DETECTION SYSTEM

The SICK Array Sensors are advanced industrial sensors used for:

- Edge detection
- Width measurement
- Diameter sensing
- Gap detection
- Transparent object sensing

Features

High Precision Measurement

Supports repeatability up to 30 µm.

TFT Display

Integrated full-color TFT display for configuration and monitoring.

Multiple Operating Modes

Supports flexible industrial applications.

Large Measuring Range

Measurement capability up to 50 mm.

Applications

Used in:

- Packaging automation
- Web edge guiding
- Film processing
- Industrial inspection systems
- Production automation

Benefits

High Accuracy

Reliable industrial measurement performance.

Flexible Detection

Supports multiple sensing applications.

Industrial Reliability

Designed for continuous operation.

SICK MACHINE VISION SENSORS – INDUSTRIAL INSPECTION SYSTEM

The SICK Machine Vision Sensors are intelligent industrial inspection devices designed for:

- Automated inspection
- Object identification
- Industrial measurement
- Position verification

Features

Automated Inspection

Supports industrial quality control.

Object Identification

Detects and identifies products accurately.

Industrial Imaging

Provides high-performance industrial image processing.

Rugged Industrial Design

Designed for industrial manufacturing environments.

Applications

Used in:

- Quality inspection
- Robotics

- Packaging systems
- Manufacturing automation
- Barcode inspection
- Production verification

Benefits

Improved Product Quality

Enhances industrial inspection accuracy.

Faster Automation

Supports automated production systems.

Reliable Operation

Stable industrial performance.

SICK AUTOMATION LIGHT GRIDS – INDUSTRIAL DETECTION SYSTEM

The SICK Automation Light Grids are industrial optical sensing systems designed for object detection, counting, and monitoring in industrial automation.

Features

High-Speed Scanning

Provides rapid object detection.

High Measurement Accuracy

Detects even small industrial objects.

Ambient Light Immunity

Reliable sensing in varying lighting conditions.

Multiple Infrared Emitters

Supports wide-area industrial sensing.

Applications

Used in:

- Conveyor systems
- Material handling
- Packaging industries
- Counting systems
- Industrial safety applications

Benefits

Fast Detection

Suitable for high-speed production systems.

Reliable Sensing

Stable industrial performance.

Industrial Flexibility

Supports complex automation applications.

SICK CONDITION MONITORING SENSORS – PREDICTIVE MAINTENANCE SYSTEM

The SICK Condition Monitoring Sensors are intelligent industrial monitoring systems designed for predictive maintenance and industrial equipment health analysis.

Features

Multi-Physics Monitoring

Measures:

- Vibration
- Shock
- Temperature

Predictive Maintenance

Helps reduce industrial failures and maintenance costs.

Rugged Stainless-Steel Housing

Designed for harsh industrial environments.

SOPAS Engineering Tool Integration

Supports:

- Parameterization
- Visualization
- Monitoring configuration

Applications

Used in:

- Rotating machinery
- Industrial motors
- Pumps
- Compressors
- Manufacturing systems
- Heavy industrial equipment

Benefits

Reduced Downtime

Identifies equipment problems early.

Lower Maintenance Costs

Supports predictive maintenance strategies.

Improved Operational Safety

Enhances industrial equipment reliability.
